

1xBet App Download: The Complete Guide

1xBet app download 2026 — install on iOS and Android, app features, one-click betting, live and bonuses. Full installation guide.

Marcus Bennett, Betting Editor · 25.05.2026

TL;DR 1xBet offers a dedicated mobile app for both Android and iOS, delivering the full platform — sports betting, live markets, casino, Aviator, and in-house 1xGames — in a single interface. Android users download the APK directly from the official site and enable sideloading; iOS users install from the App Store. Both versions support one-click betting, live streaming, and push notifications for time-sensitive promotions. The app and mobile website are nearly feature-equal, though the app wins on speed and biometric login. Bonus terms, access methods, and mirror URLs change frequently — always verify current terms on the official 1xBet site before depositing. 18+ only.

App features

The 1xBet mobile app packs the full range of the platform — sports, live, casino, crash games, and in-house 1xGames — into one interface built for quick decisions on the move.

1xBet was founded in 2007 and has since built its reputation on offering one of the broadest sports lines and deepest market coverage in the international bookmaking space. The mobile app carries that breadth without cutting corners — virtually every feature available on the desktop site is also present in the app, including account management, payments (UPI, Paytm, net banking, bank cards, and crypto are supported for Indian users), and promotional content.

Full access to line and live

The app loads the full pre-match and in-play catalogue. 1xBet is widely marketed for its exceptional market depth, and the app reflects this: cricket (IPL, international T20 and Test matches), football, kabaddi, and esports all appear prominently in the navigation for South Asian users. Live betting is real-time, with odds updating continuously during play. Live streaming is also available for selected events directly inside the app.

- Pre-match and in-play markets across cricket, football, kabaddi, esports, and dozens of additional sports
- Live streaming for eligible events — no need to switch to a browser
- Quick-access filter to jump between sport categories without losing your place in a live event
- In-play statistics panel shown alongside the live odds

One-click betting

One-click betting is a core feature of the 1xBet app. Once enabled in your account settings,

tapping an odd places a bet immediately at a pre-set stake — no confirmation screen. This is particularly useful during fast-moving live markets where odds can shift between the moment you decide and the moment your bet registers.

- Enable one-click in the app settings and set your default stake
- A single tap on any odd places the bet at that stake instantly
- Cash-out (full and partial) is also available in-app for eligible bets
- Use one-click responsibly — mistakes cannot always be reversed; 18+ only, bet within your limits

Casino, Aviator and 1xGames

Beyond sports, the app integrates 1xBet's full casino section: slots, live dealer tables, and the Aviator crash game. 1xGames — the platform's proprietary in-house game catalogue — is also fully accessible. These sections load inside the same app without redirecting to an external browser, keeping your session and wallet unified.

- Casino: slots from major providers, live dealer roulette and blackjack
- Aviator: the popular crash-format game, available under the casino or games tab
- 1xGames: in-house titles unique to the 1xBet ecosystem
- TV games and virtual sports round out the non-sports catalogue

All gambling products — including casino and crash games — carry inherent financial risk. Play responsibly and only with money you can afford to lose. 1xBet offers deposit limits, self-exclusion, and reality checks; use them if needed. 18+ only.

The app covers sports, live, casino, Aviator, and 1xGames in a single unified interface with one-click betting and live streaming built in.

Download for Android

Because Google Play does not host real-money gambling apps for most regions, the 1xBet Android app is distributed as a direct APK download from the official 1xBet website — a quick process once you enable third-party installs.

Android users in India and South Asia commonly install apps outside of Google Play, so the APK route will feel familiar. The process takes under two minutes on a typical connection. Always download the APK from the official 1xBet domain to avoid modified or malicious builds.

APK install

1. Open the official 1xBet website in your Android browser (Chrome works well).
2. Navigate to the mobile apps section — usually accessible via a banner on the homepage or a link in the site footer.
3. Tap the **Android** download button. The APK file (typically 30–60 MB) will begin downloading to your device.
4. Once downloaded, open the APK from your browser's download tray or your Files app.
5. If prompted, allow installation from this source (see Permissions below).
6. The installer will run automatically. Tap **Install** and wait for the process to complete.

7. Once installed, tap **Open** or find the 1xBet icon in your app drawer.
8. Log in with your existing account credentials or register a new account.

The whole process should take two to five minutes depending on your internet speed. If the download link appears to be blocked, the official site usually lists mirror addresses — but verify any mirror URL carefully before downloading.

Permissions

Android will ask you to allow installation of apps from unknown sources (i.e., outside Google Play). The exact path depends on your Android version:

- **Android 8 and above:** A per-app permission prompt appears when you open the APK. Enable "Allow from this source" for your browser or file manager, then proceed with the install.
- **Android 7 and below:** Go to Settings → Security → Unknown sources and toggle it on before opening the APK.
- You can revoke this permission after installation if you prefer — it is only needed during the install step.
- The app requests standard permissions: internet access, camera (for document verification if needed), and storage (for caching). No unusual permissions should be required.

Updates

Because the app lives outside Google Play, it does not update automatically via the Play Store. 1xBet handles this in two ways:

- **In-app update prompt:** When a new version is available, the app typically shows a notification or banner on launch directing you to download the updated APK.
- **Manual check:** Visit the app download page on the official site periodically to confirm you have the latest version.
- Running an outdated APK can mean missing new features or, in rare cases, encountering compatibility issues — keep it current.

Download the APK from the official 1xBet site, enable "install from unknown sources" for your browser, and install — the whole process typically takes under five minutes.

Download for iOS

iPhone and iPad users can install 1xBet directly from the Apple App Store — no APK, no settings changes required, just a standard App Store download.

The iOS installation path is the most straightforward of the two platforms. Availability in the App Store depends on your App Store region; users in regions where the app is listed can install and update it like any other app.

App Store install

1. Open the **App Store** on your iPhone or iPad.

2. Use the search bar and search for **1xBet**.
3. Locate the official app (published by 1xBet) and tap **Get**.
4. Authenticate with Face ID, Touch ID, or your Apple ID password if prompted.
5. The app will download and install automatically. Tap **Open** once complete.
6. If the app does not appear in your regional App Store, you may need to switch your App Store country. The official 1xBet site typically provides guidance on which store region lists the app.

If your account is already registered, sign in immediately after install. New users can complete registration entirely within the app.

Requirements

The 1xBet iOS app has minimum system requirements to function correctly:

- iOS version: generally iOS 12 or higher (check the App Store listing for the current minimum — this can change with app updates)
- Compatible with iPhone and iPad; an iPhone 6s or newer will typically handle the app without performance issues
- Storage: approximately 100–200 MB free space for the app and its cached data
- A stable internet connection — 4G/LTE or Wi-Fi is recommended for live betting to avoid odds slippage

First launch

After installation, the app walks you through a brief setup:

- Select your preferred language and currency (INR is available for Indian users)
- Log in or tap the registration button to create an account — registration can be completed in a single step with just a phone number or email
- Enable push notifications if you want bet settlement alerts and promotional offers sent directly to your device
- Review the responsible gambling settings — deposit limits and session reminders can be configured from the first session. 18+ only.

Face ID and Touch ID can be enabled after your first login for faster access on subsequent sessions.

iOS users install 1xBet directly from the App Store with no configuration changes — search, tap Get, and log in.

App vs mobile site

Both the 1xBet app and its mobile website offer the full feature set; the practical differences come down to speed, notifications, and convenience rather than a hard capability gap.

Some bettors prefer to avoid installing an additional app; others find the app noticeably faster. Understanding the actual differences helps you choose the right tool for your habits.

Feature parity

1xBet has invested in keeping its mobile web experience close to the native apps. In practice, the feature gap is narrow:

Feature	Native app (Android/iOS)	Mobile site (browser)
Sports betting (pre-match)	Yes	Yes
Live betting	Yes	Yes
Live streaming	Yes	Yes (browser-dependent)
One-click betting	Yes	Yes
Cash-out	Yes	Yes
Casino / Aviator / 1xGames	Yes	Yes
Push notifications	Yes	No (browser notifications vary)
Biometric login	Yes (Face/Touch ID)	No
No install needed	No	Yes
Stays on a blocked URL	Possible (app may cache connectivity)	Requires active mirror

Performance

Native apps generally have an edge in launch speed and animation smoothness because they are compiled for the device rather than interpreted by a browser engine. For live betting — where odds change in seconds — this can translate to slightly faster load times on the bet slip and odds refresh. That said, the mobile site on a modern browser and a good 4G connection performs well for most users. The main practical performance gap appears on slower connections or older devices.

- App: faster initial load after install, push notifications, biometric login
- Mobile site: no install, always uses the latest version, works on any device with a browser
- Both: same odds, same markets, same wallet and payment methods

When to use each

- **Use the app** if you bet regularly: the speed and push notifications add up over time, and biometric login reduces friction
- **Use the mobile site** if you are on a shared or temporary device, or if you prefer not to install additional apps
- **Both are valid** — your account, balance, and bet history are shared across all access methods
- If the official domain appears blocked by your ISP, the app may continue to connect while you wait for a working mirror — check the official 1xBet site for current alternatives

The app and mobile site are nearly feature-equal; the app wins on speed, notifications, and biometric login, while the mobile site requires no install and works on any browser.

Bonuses in the app

The 1xBet app gives full access to the welcome bonus and ongoing promotions — the same offers available on the desktop site, with no app-exclusive penalty or hidden differences.

One common concern among new users is whether installing the app affects their eligibility for bonuses, or whether separate offers exist for mobile installs. Here is what the platform structure looks like based on publicly available information — always reconfirm current terms on the official 1xBet site before depositing, as terms change frequently.

Install bonus

1xBet does not advertise a standalone "install bonus" that is separate from the standard welcome offer. The welcome bonus — up to 100% on your first deposit (exact cap shown on the official site; check before depositing) — is available whether you register via the app, the mobile site, or the desktop site. Registering and depositing through the app counts the same as any other method for bonus purposes.

- Welcome offer: up to 100% matched first deposit; exact maximum displayed on the official 1xBet site at the time of registration
- Bonus is available for Indian users depositing in INR
- Minimum deposit and wagering requirements apply — read the full terms on the official site
- Promotional codes or banners in the app may unlock additional deposit match percentages at certain times

Exclusive promotions

1xBet runs a broad rotating promotions calendar that covers sports, casino, and live dealer products. The app surfaces these through:

- **Push notifications:** Opt-in alerts for new promotions, odds boosts, and limited-time offers sent directly to your device
- **In-app promotions tab:** The dedicated promotions section in the app is the same as on the site — reload offers, accumulator bonuses, cashback promotions, and prize draws
- **Live event specials:** Odds boosts tied to major cricket or football events are frequently promoted inside the app during match periods
- Promotional availability varies by region and account status — terms may differ for Indian accounts

Differences from site

In practice, there is no structural bonus difference between the app and the desktop site — they share the same account and the same promotional engine. A few practical points worth noting:

- Some promotions require opting in via a specific page; the app may display a slightly different layout, but the underlying offer is the same
- Push notifications give app users a timing advantage — you may see a limited

promotion before it is prominently featured on the site

- If you registered on the site and later switch to the app, your bonus history and active offers carry over automatically

Bonus terms, limits, mirrors, and access methods change frequently — always reconfirm on the official 1xBet site before depositing. 18+ only. Gambling involves financial risk. Play responsibly.

App users access the same welcome bonus and promotions as desktop users; push notifications give you a practical timing edge on limited-time offers.

FAQ

Is the 1xBet app free to download?

Yes. The Android APK and the iOS App Store app are both free to download and install. There are no installation fees or subscription charges for using the app itself.

Why is the 1xBet app not on Google Play?

Google Play's policies restrict real-money gambling apps in many regions, so 1xBet distributes the Android version as a direct APK download from its official website. This is a standard approach for international bookmakers operating in India and South Asia.

Can I use the same account on the app and the desktop site?

Yes. Your 1xBet account — balance, bet history, bonuses, and settings — is shared across the app, mobile site, and desktop site. You can switch between them freely without any impact on your account.

What should I do if the 1xBet app won't connect?

First check your internet connection. If the connection is fine, the official 1xBet domain may be temporarily restricted by your ISP. The official 1xBet site typically publishes current working mirror addresses. Using a VPN is another option, though you should verify this is permitted under the current terms of service in your jurisdiction.

Does the app support UPI and Paytm for deposits?

Based on publicly available information, 1xBet supports UPI, Paytm, bank cards, net banking, and crypto for Indian users. Payment method availability can change — always verify the current deposit options inside the app or on the official site before initiating a transaction.

Is 1xBet legal to use in India?

1xBet operates under an international Curaçao eGaming license. India does not have a comprehensive federal law explicitly banning offshore betting, though the legal landscape varies by state and is subject to change. This guide is informational only — consult applicable local regulations and always gamble responsibly. 18+ only.
